EXPERIENCE

TWILIO, INCORPORATED SENIOR → STAFF SOFTWARE ENGINEER

Sep 2022 - Present | Santa Barbara / San Luis Obispo, CA

- Tech lead for the ClickHouse-based observability platform powering Twilio Console and CDP Analytics, ingesting and querying 50M+ customer telemetry events/day (events, logs, metrics) on self-hosted, sharded, replicated clusters on Kubernetes.
- Authored the design and led the migration from a single-cluster, multi-domain to a multi-cluster, single-domain ClickHouse architecture, cutting cloud COGS by 24% and average query latency by 29%.
- Redesigned and rebuilt the v2 ingestion pipeline, halving memory usage, adding deduplication, and making query results deterministic.
- Architecting an event-streams firehose into a query-optimized data warehouse, with a shared schema catalog serving 15+ producer and consumer teams.
- Drove AI-assisted development (Claude Code) across 15–50 engineers by building shared skills, agents, and commands; accelerated delivery and fully automated team runbooks.
- Wrote cross-team design docs and RFCs, led incident response and reliability improvements, and interviewed for engineering hiring loops.

TELADOC HEALTH SOFTWARE ENGINEER III, ENGINEERING TECH LEAD

Nov 2021 - Sep 2022 | Santa Barbara, CA

- Led two teams simultaneously - web platform and maintenance of value-added services.
- Broke down the React SPA's global state management to use smaller domain-driven stores, reducing unwanted re-renders and improving performance by 200%.
- Skills used: Rails, React, Node, and other database and deployment technologies.

APPFOLIO INCORPORATED SOFTWARE ENGINEER I AND II

Jul 2017 - Nov 2021 | Santa Barbara, CA

- Co-created a data vendor fallback pattern for tenant screening that auto-switches to the next available vendor on outage, reducing vendor-outage incidents to effectively zero.
- Co-created an internal tool for public record analysts to manage screening-report inquiries, cutting customer turnaround from 3 days to 1 hour.
- Led third-party integrations and compliance deliverables under deadlines; created open-source Ruby gems and a CircleCI plugin flagging code incompatible with the next Rails version.
- Mentored summer interns and onboarded new hires.

SKILLS

AI/PRODUCTIVITY

Claude Code Power User | Codebase Retrofitting for AI | AI Context Management | Shared Skills, Agents & Commands

TECHNOLOGIES

Ruby | Golang | Node (TypeScript) | SQL | SOLID | Rails | React | Kafka | ClickHouse

INFRASTRUCTURE

AWS | Docker | Kubernetes (K8S) | CI/CD | Git | DataDog | GitOps | ArgoCD | Terraform | Prometheus
